Summary

Software Engineer with 4+ years of experience building backend systems, RESTful APIs, and AI-integrated services across fintech and e-commerce domains. Proficient in Python, Java, FastAPI, Django, and cloud infrastructure (AWS, Docker, Kubernetes). Skilled in database optimization, CI/CD automation, and integrating LLMs (OpenAI, Claude) for compliance monitoring, semantic search, and developer productivity. Consistent track record of improving system performance and delivering production-grade software within Agile teams.

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, SQL, C

Backend & APIs: Django, FastAPI, Flask, Node.js, REST APIs, GraphQL

Frontend: React.js, AngularJS, HTML5, CSS3, Bootstrap

Databases: PostgreSQL, MySQL, Microsoft SQL Server, SQLite, MongoDB, ChromaDB

Cloud & DevOps: AWS (EC2, S3, RDS), Azure, GCP, Docker, Kubernetes, Terraform, Jenkins, CI/CD

AI & LLM Integration: OpenAI APIs, Claude (Anthropic), Prompt Engineering, RAG, Embeddings, Vector Databases

Practices & Tools: Git, GitHub, Bitbucket, JIRA, Confluence, Agile/Scrum, Test-Driven Development

Professional Experience

JPMorgan Chase & Co.

Dec 2025 – May 2026

Software Engineer

New York, NY

- Owned end-to-end design and delivery of RESTful APIs in Python (FastAPI) and Node.js serving 100,000+ daily requests, integrating enterprise banking systems with OpenAI models for real-time compliance monitoring and predictive analytics.
- Architected the data persistence layer across PostgreSQL, MongoDB, and ChromaDB, defining schema contracts and indexing strategies that reduced query latency by 30% and enabled AI-driven semantic search across 10M+ financial records.
- Led the containerization and Kubernetes orchestration strategy for 8 microservices on AWS (EC2, S3), reducing deployment time by 45%, improving fault isolation, and achieving 99.9% uptime across production environments.
- Designed React.js dashboards for compliance and operational reporting consumed by 500+ internal users, improving data visualization speed by 40% and eliminating manual reporting workflows.
- Established CI/CD pipelines and enforced TDD practices using Git, Bitbucket, and JIRA, reducing production defects by 30% and cutting release cycle time across Agile Scrum sprints.

CodeNest Solutions

Oct 2021 – Nov 2023

Backend Python Developer

Hyderabad, India

- Developed Python backend services for multi-tenant SaaS platforms and enterprise integrations, improving API response time by 35% under high-traffic conditions.
- Normalized relational database schemas and tuned complex SQL queries in PostgreSQL and MySQL, reducing data retrieval latency across high-traffic production environments.
- Migrated backend microservices to Docker and optimized AWS resource allocation, improving deployment efficiency by 45% and lowering infrastructure costs by 30%.
- Collaborated with 10+ cross-functional stakeholders across product, QA, and operations to gather requirements, resolve defects early, and ship features aligned to business priorities.
- Drove Agile sprint delivery via Git, GitHub, and JIRA with TDD practices, reducing recurring integration defects by 25% across release cycles.

CodeNest Solutions

May 2020 – Sep 2021

Python Developer

Hyderabad, India

- Built Django-based backend applications for e-commerce workflows including payment gateway integrations, product management, and role-based authentication systems.
- Designed normalized PostgreSQL and MySQL schemas for consistent, low-latency transaction processing across high-volume order data.
- Engineered RESTful API endpoints for front-end clients and third-party services, applying input validation and error-handling patterns to ensure data integrity and reliability.
- Standardized environments with Docker, eliminating configuration inconsistencies across teams, and streamlined AWS deployments under TDD and Git-based version control.

Projects

Enterprise Inventory & Order Management System

Java, Spring Boot, GraphQL, PostgreSQL, Redis, Docker, AWS

- Designed a Java (Spring Boot) microservices platform with a GraphQL API layer across 5 services, enabling flexible client-driven queries that reduced over-fetching by 60% versus prior REST endpoints.
- Architected PostgreSQL schemas with optimized indexes and Redis caching, achieving sub-80ms p95 latency under 10,000+ concurrent requests; deployed on AWS via Docker/Kubernetes with Jenkins CI achieving 92% test coverage.

E-Commerce Backend Platform

Python, Django, PostgreSQL, Redis, Docker, AWS

- Owned full backend architecture for a platform handling 5,000+ daily transactions, including payment gateway integrations, role-based authentication, and product management services.
- Optimized PostgreSQL query execution plans and introduced Redis caching, reducing average retrieval latency by 30% and supporting a 3x traffic increase without infrastructure changes.

Education

New York University

New York, USA

Master of Science, Computer Engineering

Aug 2024 – May 2026

- Key Coursework:** Machine Learning, Deep Learning, Distributed Systems, Big Data, Database Systems, Computer System Architecture, Advanced Python for Data Science
